

=APRIL.= _IV Month._

There the tall Ships the rolling Billows sweep,
 And bound triumphant o'er th' unfathom'd Deep.
 There great Leviathan in regal Pride,
 The scaly Nations crouding by his Side,
 Far in the dark Recesses of the Main
 O'er Nature's Wastes extends his boundless Reign.
 Round the dark Bottoms of the Mountains roves,
 The hoary Deep swells dreadful as he moves.

[Now]

Sun's Light must be such as would be quite intolerable to Eyes like ours. But it does not follow, that Mercury is therefore uninhabitable; since it can be no Difficulty for the Divine Power and Wisdom to accommodate the Inhabitants to the Place they are to inhabit; as the Cold we see Frogs and Fishes bear very well, would soon deprive any of our Species of Life. To an Eye such as ours, the Sun, seen from this Planet, would appear seven times as large as he does to us. He is always so near the Sun, that we have no Opportunity of discovering whether he turns round upon his own Axis, or not, and consequently cannot determine what Length the Days and Nights in Mercury are. He is seen sometimes with Telescopes horned like the Moon, and sometimes like a Half moon, but never fully illuminated, because that Side of the Planet, on which the Sun shines, is never turned full towards us, except when he is so near the Sun, as to be lost in the Brightness of his Beams. His enlightned Side is always towards the Sun, which shews, that he only shines with the borrowed Light of the Sun. That this Planet revolves round the Sun in an Orbit nearer to him, than that of the Earth, is plain, because he is never seen opposite to the Sun, but always in the West, when he is seen at Sun-setting, and in the East, when he is seen at Sun-rising; and that never beyond the Distance of twenty-eight degrees from the Sun (a Degree is about
