

JUNE VI Month.

To each th' appointed Sultenance bestows,
 To each the noxious and the healthful shows.
 Thou spread'st thy Boanty—meagre Famine flies:
 Thou hid'st thy Face—their vital Vigour dies.
 Thy pow'ful Word again restores their Breath;
 Renew'd Creation triumphs over Death.
 Th' Almighty o'er his Works casts down his Eye,
 And views their various Excellence with Joy:

His

D. H. ☉ ☽ ♁ ♀ ♂ ♃ D.L.

Bowling-green not only proceeds forward, but
 likewise turns round upon its own Axis, so
 does the Earth turn once round upon its Axis
 as it goes along, every twenty-four Hours. It
 is astonishing, and even frightful to think, that
 this vast and cumbersome Globe of Earth and
 Sea, which is almost twenty five thousand
 Miles in Circumference, has received such an
 Impulse from the Almighty Arm, as has car-
 ried it constantly for above these five thousand
 Years, that we know of, round the Sun at
 the Rate of at least fifty thousand Miles every
 Hour, which it must absolutely do, to go round
 the Sun in a Year at the Distance of eighty
 Millions of Miles from him. So that, if an
 Angel were to come from some other World,
 and to place himself near the Earth's Way,
 he would see it pass by him with a Swiftness,
 to which that of a Cannon Ball is but as one
 to one hundred, and would be left behind by
 it no less than the above Number of Miles in
 the Space of one Hour. There is no more
 Reason to doubt, that the Earth goes in this
 Manner round the Sun, than there would be
 for a Passenger in a Ship on smooth Water,
 who saw the Objects upon Land continually
 passing by, to doubt whether the Vessel he
 was in, or the Shore, was in Motion. We see
 the Sun continually changes his Place with re-
 spect to the fixed Stars, and must own it to be
 highly improbable that this Change of Place
 is owing to any Change in the whole Heavens,
 which
