

=JULY.= _VII Month._

His Works with Rev'rence own his pow'rful Hand,
 And humble Nature waits his dread Command,
 He looks upon the Earth--her Pillars shake,
 And from her Centre her Foundations quake.
 The Hills he touches--Clouds of Smoke arise,
 And sulph'rous Streams mount heavy to the Skies.

Whilst Life informs this Frame, that Life shall be
 (O First and Greatest!) sacred all to Thee.

[Thy]

which, considering the Distance of the starry Heavens, would require a Motion infinitely more rapid than that above ascribed to the Earth. As for the common Objection against the Earth's Motion, that we are not sensible of it, and that a Stone thrown up from the Earth ought not to fall down upon the same Place again; it is answered at once by the above Comparison of a Ship, from which (as has been often found by Experiment) a Ball fired directly up in the Air, does not fall behind the Ship, let her Motion be ever so swift, but, partaking of the Ship's Motion, is carried forward in the Air, and falls down again upon the Deck. And as to the Objections taken from some Scripture Expressions, which seem to contradict the Theory of the Earth's Motion, it is plain, from innumerable Instances, that Revelation was not given to Mankind to make them Philosophers or deep Reasoners, but to improve them in Virtue and Piety; and that it was therefore proper it should be expressed in a Manner accommodated to common Capacities and popular Opinions in all Points merely speculative, and which were not to have any direct Influence upon the Hearts and Lives of Men. The Truth of the Matter is, that the Demonstrations given by the incomparable Sir _Isaac Newton_, have established the Doctrine of the Motion of the Earth and other Planets, and the Comets round the Sun, and of the
